# General

Please use the space below for project feedback.

Please add lights to the field! It is depressing having all of the football home games in the middle of the day.

Summit students are responsible enough for lighted fields. It would also result in more people coming to watch the I am in support of adding lights to Tatlock Field and opening "Friday Night Lights" events to girls sports, such as Field Hockey and Soccer.

These types of events help build community and spirit for our town and our young athletes. What's more, we owe it to our children to shine a spotlight (literally!) on girls sports -- particularly growing sports like Field Hockey (Summit now has a rec program for Field Hockey and we are seeing lots of girls get into the sport at a younger age), and lacrosse (Summit Girls Lacrosse has won the state championship for the last 3 years and deserve a larger stage and greater support from the community).

I love that Football has a FNL tradition, where girls and boys, parents and grandparents show their Hilltopper pride. We need to create parity with girls sports and give our female athletes the same stage. The community should be able to support girls sports with the same enthusiasm that they do Boys' Football at FNL. We currently do not have that equal opportunity because we do not have a stadium venue with lights.

Hi David!

I'm so bummed I can't make this, my mom's having knee surgery and I have to be in Philly.

Could you kindly share the presentation after the meeting?

As always, I am so appreciative of everything you and the DCP do for Summit - - and you know I'm hopeful we can get more use out of Tatlock so others can enjoy it just as much as our family has over the years. We're lucky to have Tatlock as our "second back yard."

😊

Enjoy the rest of your weekend!

I support adding lights at Tatlock so that we may expand the sports that the community rallies behind, including girls field hockey and girls lacrosse. It's about time girls get a stage to showcase their hard work and

I am in favor of the lights

I am in favor of lighting Tatlock!

While I am sensitive to the neighbors' concerns, especially on Butler Parkway, regarding their quality of life, so long as the number of evenings that brighter lights are used at Tatlock is regulated and limited, I fail to see the objection.

How many nights per month are under discussion? If it were something on the order of 1-2 per month for 9-10 months, I believe that would be acceptable.

Many more than that and I think it would become a quality of life burden for local residents, bearing in mind not

I am in favor of lights on Tatlock.

I AM in favor of Lights on Tatlock.

I am in favor of the lights on Tatlock

In favor. However, as a resident of the neighborhood, I do share the concerns that have been voiced regarding safety and traffic concerns on Butler Parkway. I would like to know that measures are being put in place to address pedestrian safety. Congestion has already worsened during events since the addition of the sidewalk, and it is difficult for cars to pass when coming from both sides during events. While the street can't support a sidewalk on the opposite side, it is necessary to walk along that side and cross over from that side down by Canoe Brook Place. The athletes who reside in the neighborhood will be exiting and walking from that entrance in the

I AM in favor of Lights on Tatlock.

I am in support of Tatlock Lights. There is not only a need for the youth sports community. It's also a healthy outlet for Summit residents to utilize at night/after work. It becomes a safe place for many working moms to walk at night.

It also would be a safe place for our children to congregate at in the evenings/night.

I am in favor of the lights!

In favor

I am in favor of the lights at Tatlock

In Favor

In Favor

In favor of lights

I am in favor of lights at Tatlock. Youth need more access to fields. Summit does not have enough field and green space to meet the needs of our kids. This is important to the health and well being of our community.

I AM in favor.

I am in favor of lights at Tatlock

I am in favor for the lights at Tatlock Field and so would Bill Tatlock and Howie Anderson

I am in favor at the lights at Tatlock.

I am supportive of lights on tatlock

There are lights at the tennis and pickle ball courts already as well as at upper tatlock. Why are the neighbors in the area ok with those lights but not lights at lower tatlock field?

Jefferson field has a curfew where lights need to be off by 9 pm during the school year and 9:30 pm during the summer. This seems completely reasonable to apply to the lower tatlock field lights. Why aren't neighbors by lower tatlock field feel ok with this reasonable compromise?

The lights at lower tatlock field are about the youth of our town and giving them more opportunities to play sports. This promotes health and well being for our children. Sports teach our children valuable life lessons and keeps them out of trouble. Why do the families that live near tatlock field not want to support the children of our town?

I AM in favor of Lights on Tatlock.

I AM in favor of the lights

Lights have already been in place at upper Tatlock field and at the tennis courts. With the twin offering more sports for our children we need to install updated lighting at both fields with guidelines. There should be rules around when loud speakers/broadcasting can be done, and rules when lights have to be turned off by.

This will also help our working population that would like to use the track at night for safety reasons when it is too dark to run on the streets.

I have three children who went to or are in summit high school. I bought in the memorial field neighborhood Over 20 years ago.

I they were to be put up there, and off at a reasonable hour, I don't see the objection to it, and would not hesitate if it came to memorial!

In favor of lighting the field.

In favor light up the field

Light up the field in favor

In favor light the field

Please stop using "stadium lights" as a form of wording as Tatlock field is not a true stadium I think this word has been misused and needs to be reworded. Thanks!

Also- I do not think it's healthy for kids to be playing sports until 10pm during the week so I vote for lights to be off at 9 the latest.

I would also suggest downlighting and more trees.

Athletics are an integral part of raising a family in Summit. Expanding available time to use the fields by having lights at Tatlock would benefit families and children throughout town. I fully support the lights project to meet that I AM in favor of lights at Tatlock.

"...over the last 10 years, participation in Summit sports has continued to grow. Demand for field time has exceeded the current capacity for scheduling games..."

Where is the data that supports this statement?

If demand is high then what is the actual field usage vs available time to use?

Who is asking for field time at Tatlock upper and lower field?

What sports need to be publicly supported/funded?

Are public funds supporting private sporting organizations? If so, why?

What sports have not been able to obtain field time?

We are in favor of the lights!

I support the lights. I graduated in 1993 with 170 people in my class. The high school had gone through several additions. The fields have not changed. It's time to put up lights and invest in our fields and field house.

I am for the lights at Tatlock

Our family are supporters of seriously researching and putting into place lights on Investors Field. For as long as we have lived here with our two kids (13 years I think!) this has been discussed with no real progress to making it happen. I do have athletes who live in my house who play both football and lacrosse. But with the growing nature of other sports such as girls flag football and field hockey lights on Investors would come at such a needed time. There is just not enough field space in Summit!! My daughter is now in college but some of her fondest SHS memories are from Friday Night Lights. Football under the lights is a great community/student building activity and these are nights she remembers so fondly and are documented in photo album pictures. My son is a freshman in high school and his football and lacrosse teams of course would directly benefit from having lights on Investors. But they wouldn't be the only ones. There are parents/residents who work full time that would take advantage of walking/running around the track after work if they had that option. I have spoken to some of them. And we are also losing access to some of our already limited field space in Summit! My understanding is that Summit will have far less control of Glenside Field going forward given current events in the county and unfortunately that was one of our few lit fields!

I do understand that there will be neighbors opposed as historically there has been. I can only say that this Please add the lights! All 3 of my kids play sports and this would help tremendously with field availability. It helps with field hockey for my youngest. My middle daughter runs track and does pole vaulting, so this too would be beneficial. As of now, I have to drive my middle one to Fairfield for her pole vaulting. All three of them play I am very much in support of lights and general field house improvements at Tatlock field. Summit attracts young families to live in this town because of its great school system and strong sense of community. Athletics are an important part of Summit schools at both the Middle and High School levels. Having updated athletic facilities, including locker rooms and field lighting, enhances the school district, making it a top choice for families, which then helps the vibrancy of the town and even supports property values. There are a growing number of sports Looking forward to seeing the lights at Tatlock.

I support having lights at Tatlock

I vote a resounding YES for lights at Tatlock Field. More and more sports are sprouting up in Summit, and more and more teams want to practice not only after hours in season, but out of season as well. We are being limited to our use of Glenside, one of the few lighted options within Summit. It's imperative that we have an additional

I support the lights being installed at Tatlock

I would like to see lights installed at tatlock

Fully support lights at Tatlock. My son played a dangerous football game there last year at dusk and there were injuries/the game was cut short. Lights would be beneficial for the kids and the whole community to rally around Summit sports during big games. With Glenside out of use, we are desperate need more field space later in the day. Thank you for taking on this project.

The lack of field space is a big issue in Summit. Summit is a very densely built town so we need to be creative about the field spaces that we have. Youth sports have so many advantages for children, especially in the age of smartphones, so we need to provide as many venues as possible for children to play. The benefits of lighting

I AM strongly in favor of the lights at Tatlock. I believe that Friday Night Lights a couple of times a season is something that would further bring the great Summit community together, be fun/rewarding for the student athletes and their classmates, and further promote the status of Summit as a great academic/sports school system that attracts residents and raises property values overall (and is a staple throughout the nation so frankly it's shocking that there is meaningful opposition to the concept). Moreover, there is a desperate need for more practice

My wife and I are strongly in favor of the Tatlock Field Lighting Project. We believe that having lights will further Great for the sports teams & individual members of the community. Win win!

I think lights on tatlock would be great and would enhance the stadium and allow for people to use the venue in Jill Joseph

I think lighting is necessary, but only if the neighbors' concerns are taken into consideration. Living near a football field comes with the possibility of lighting. However I don't believe it needs to be on all of the time.

Based on lights experience around upper High School field, where I live next to, I do not see negative impact in my opinion on the neighbourhood.. moreover kids have lights and have place to play at night when games are not on, I think ihaving lights is a good idea and would help the various community programs if done correctly. Summit

Turn the lights on!!! Loved Friday night lights and always felt it should be more than just once a year.

I support the lights

I'm in favor of the lights to make Tatlock field safe and accessible but up to a certain time.

I prefer to have lights at Tatlock. It brings our community and sports teams -of all ages- together throughout the year. It also prevents teens from driving to practices and games at night, exposing new drivers to hazards they are Why don't people need to leave names

Go for it

In Favor

I believe this a great idea for the kids that use that field and is long overdue

My stance is this more of a want than a need?? It seems the club teams are driving this more so than the school athletic programs. Summit has had much success over the last 60 or so without lights. Need to see proof lights

I am in favor of Lights at Tatlock

As long as the lights are used according to agreements made by the city and the residents there should be no reason not have them. A 25 year contract on light usage could penalize anyone who uses them outside of the

This project is vital to the community of Summit. Due to demographic changes, largely that older people leave town at a quicker rate because of high taxes, there has been an influx of school aged children in the last thirty years. I graduated Summit High School in '94 with 150 students, while the current 9th grade class carries 300. Was there a double in available housing in that time?

Opponents to the project can point to anomaly years with large classes in the past, but the averages are up significantly as Summit now is on the verge of being classified as a Group IV school by the NJSIAA. In the thirty years that this demographic shift has occurred, there hasn't been a commensurate growth in field space - not even close.

Scheduled sports activities at Summit fields now far outstrip what was once sufficient space. Across all sports - field hockey, soccer, high school flag football, band, outdoor track, football, lacrosse etc - the field demand is overwhelming to satisfy the needs. And most of the aforementioned sports operate at the youth level across genders as well. Our current youth football teams practice at 6:30pm at night because the high school teams control the fields until that time. Due to this, our youth players are in serious harm of injury three nights/week as football is a high contact sport and garners the absolute attention and visibility of both the players and the coaches.

3/4th grade flag football this year had to turn kids away because they only had one time slot and wouldn't have room for all the demand. Telling 3rd graders they can't participate because there is no room is appalling, particularly for a community offered program.

I fully support lights at lower tatlock field and would like to see a compromise made regarding a "turn off time" Lights!!

This project is long overdue and exists all over the area; please approve and execute on it.

Strongly in favor!

I support adding lights to Investors Field. Having attended a high school that had lights, it seems completely Lights at tatlock field would be super beneficial for individuals who would like to run the track at night after work. It would allow more residents in summit to be able to exercise outside as many gyms close early which would not We fully support the proposed lighting for tatlock

I think the community needs football games on Friday nights. There were 8 regular season games. Therefore I can't believe this project is being pushed through. Once again, the neighbors' voices in the tatlock area were not heard. Neighbors are overwhelmingly opposed to this. There is one light the fields sign on Butler Parkway as opposed to countless stop the stadium signs. It seems like it's full steam ahead with no regard to the feel of the

The traffic study conducted seems inadequate considering it does not take into consideration the impact to canoe brook parkway, which sees an increase in traffic and cars parked on the road during any events at the field.

Further, with the proposed canoe Brook parkway sidewalk project, which includes narrowing canoe Brook parkway by 9 feet at certain areas, it would be irresponsible to not consider the projects in tandem and potential impacts of both on each other.

Tatlock field has been there since 1960. There have been football games and track events there ever since. It is the only stadium seating in Summit. With the increase in both women's and men's sports, field space is at a premium. It isn't worth it to light the grass fields at Memorial Field because grass fields cannot be played on when weather is bad and in when you do it damages the field surface and inequality would cause injuries.

Although I emphasize with the Tatlock area residents, the fact is, Tatlock belongs to all Summit residents. Those who live in the surrounding area likely moved there because of the playground, proximity to Washington and the access to open space for their children to practice sports. They also assumed the risk of crowds when moving to the neighborhood. It's like buying a home on Morris Avenue and complaining about traffic, or those who live near the other Summit Schools complaining about on street parking on school days and crowded streets during drop off and pick-up. All assume the risk. To complain about the conditions and be hostile to visitors is unacceptable.

I believe lights should be installed at Tatlock but with strict time restrictions and event rules.

1. Lights should be used only from 9/1 through 5/1.
2. Lights should be turned off by 9:00 when there are evening practices. No exceptions.
3. High School night games should be limited to 1 game a season and 1 track event per season.

In favor of the lights!

As a father of young kids I support this project. I live on Webster and can see the lights at the high school every night until they turn off. If residents are concerned about safety, can you ask the police department how often they This will be a great opportunity to get the community more field time now with also girls flag football and it's no just I live on Wade Drive, 2 blocks over from the field. I fully support this project.

For all that live in the area. You chose to live by an athletic field, did you think, or hope that no events would be happening there.

Don't want the lights

I don't want the lights

These have been asked previously at community meetings, in emails to the DCP and Councilman Smallwood, and at various council meetings. They have not been answered. 1) We are told in the latest DCP email that there is a shortage of field space in Summit and that "current sports league presidents agree" on this "fact." Where is the data to support this premise? I cannot find it on the DCP page or anywhere on the City of Summit's website. Please provide field usage numbers by sport and season, and please show what teams and/or sports have not had adequate field space, and whether that was due to a grass field being unusable because of weather. 2) If your data supports the concept that field space is an issue, can you please explain the plan for lighting Tatlock and how that would specifically address and solve this supposed problem? Again, data would be helpful here. 3) Is the City using any of the findings of the Master Plan to support the proposal for lighting Tatlock? If so, can you please show where these lights are recommended in the current master plan? If the DCP is not using the City's master plan, can you please explain why it is not? Surely, a plan that the City has paid for with thousands of dollars of taxpayer money should be used as the guideline for maintaining and improving our recreational facilities. If it is not, I am writing to express my deep concern about the way the Department of Community Programs has handled the discussions surrounding the proposal to install lights on the football field permanently. It has become increasingly evident that the agency has not made any meaningful efforts to listen to or address the community's concerns.

Most recently, the decision to host a meeting at LCJSMS that intentionally prioritizes voices in support of lighting the field—while neglecting dissenting opinions—demonstrates a clear bias. This approach not only alienates those with legitimate concerns but also undermines the agency's obligation to represent and serve the entire community fairly. The email requesting only comments in support is so aggravating, especially after attending those open community forums where comments questioning the need for lights were recorded with eye-rolling and visible disdain from the DCP leaders, who appear unprofessional and unapologetic about their inability to remain neutral. If the Department of Community Programs truly acts on behalf of all residents, it should avoid even the appearance of favoritism and make every effort to foster an inclusive dialogue.

Additionally, it is troubling that no substantive evidence or formal study has been presented to justify the need for permanent lighting. Relying solely on anecdotal support from proponents is not sufficient to make such a significant, long-term decision that could impact the quality of life for many in our community. Where is the data demonstrating the necessity of this project?

In Favor

Summit's portfolio of athletic fields contains numerous multi-use fields where t-ball, softball, baseball, soccer, field hockey and lacrosse compete for time and space. As all youth programs have grown, the need for field space - another field- is long overdue. Lights at Tatlock create "another field" in a very cost effective manner by providing a couple extra hours of usage in the shoulder seasons. The network effects of using the Tatlock fields for soccer, I have lived in Summit over 35 yrs. I strongly oppose installing of stadium lights at Tatlock field.

It will do irreversible damage to the quality of life for our neighborhood. The Increased noise, traffic, litter everywhere will negatively impact our neighborhood. It will also negatively impact our home value. Please do not I am in STRONG OPPOSITION to the installation of stadium lights at Tatlock Stadium. This would be a direct Adding lights at Tatlock Field will benefit ALL sports and grade levels, addressing critical needs such as:

The growing youth population in Summit – SLC supported 775 lacrosse players in 2024

Increased demand for sports and activities at Tatlock Field

Creating healthy opportunities for our young players to work on their game (vs. screen time)

Supporting this important initiative agreed upon years ago for the benefit of our community - from tee ball, to youth soccer, to high school sports to adult leagues and social events - there is nobody who isn't positively impacted

I wholeheartedly support lights on Tatlock field. In addition to the numerous sporting events for all ages to be both participants and spectators, there are also band/cheerleader competitions and community events as well. Additionally, the camaraderie and school spirit of Summit students and families enjoying nighttime events far Fully supportive

Overwhelming support. Provides kids a healthy life style. The best athletes put in the work when others can't or don't. Let's provide our children an opportunity to pursue their athletic dreams when the sun is down.

I am in full support of this project. Lights would be a valuable addition to the field at Tatlock that would positively I support adding lights at Tatlock field. Summit is a town full of youth and teen athletes, and we need more sports venues to support the growing number of athletes and teams in our town. Parking and traffic are issues in Summit across the board; that reason should not be grounds for stifling our young population's desire to stay active and participate in competitive sports. There are temporary inconveniences that happen day in and day out in every neighborhood in this town, for example, the constant new construction and trucks that line the streets, the street Playing sports "under the lights" was a special part of my childhood, the children of Summit deserve the same. Are we currently using the fields where we do have lights to the maximum? Has there been a study done to confirm that? Would hate for all of the "keeping kids healthy" lip service to turn out to truly be just folks trying to I'm highly supportive of adding lights to Tatlock Field. I believe that this initiative will benefit the health and wellbeing of Summit's children as it will increase outdoor recreation availability for children of all ages. Field access has been harder to come by for Summit's various sports leagues because more children are participating in youth

Our Family passionately and strongly supports the Tatlock Field Lighting Project.

~~My family and I are in favor of lights being put on at Tatlock field. The current lack of lights is limiting our use of the field.~~ This limitation is causing our community's children to miss out on many hours of learning and community building. We have personally seen many instances of obstacles and playing time loss caused by this issue. As the mother of an 8th grade daughter and 5th grade son in Summit, I would like to see this changed.

The lights at Tatlock field are important for ALL youth sports in town. As a field hockey coach for the community center I can directly attest to the lack of field space in town, which in turn has created situations where too many Adding lights at Tatlock Field will benefit our kids enormously. Having more places to hold practices and games would be so amazing and also help these kids who are being forced to practice late into the night at the age of 8/9yo because there are too many practices trying to be scheduled at SHS.

We as a family rely on outdoor sports to help us create an active lifestyle and not holed up at home on screens. It's We really need more lit fields in Summit. I support this

I am concerned about the disregard of concerns of neighbors abutting the field and maintaining the upsetting the quiet neighborhood spirit of Summit. The field is embedded in a residential neighborhood and given the lack of separation, there must be some additional consideration for the late nights (I've seen 10pm published, which The proposed lighting project will destroy property values and quality of life in neighborhoods with this expensive proposal lacking common sense. Why would Summit residents oppose a project that is a positive for the town? Simply because the lighting, noise, traffic and ancillary affects on a residential area makes no sense. This is not the correct location for evening training and games in this densely populated area. Tunnel vision planning is As one of the houses that will be MOST affected by lower Tatlock lights installation, I want to voice my SUPPORT for the project. My husband, Alex Ngo, and I recognize the need for additional field use time in town, for our growing youth sports programs. I don't feel the need to indulge with reasons why this is beneficial, other people will do that. I hope to see the project move forward. However, I also want to emphasize the importance of setting conditions and limits for lights use. While some of my neighbors oppose the lights completely, I believe others would be amenable if the plan includes details to respect the impacts on local homes. Plans such as limiting lights I support having the lights at Tatlock especially for the winter months but would like to have a designated time It is incredible that we still do not have lights at Tatlock given how athletic our town is. I have two boys in college who played sports all the way through for Summit (football, hockey and lacrosse) and also one currently at the middle school. Summit is such an incredible community and lights at Tatlock will only help foster healthy activities & team camaraderie. It will be great to be able to have practices late for our kids as we desperately need more field space and most importantly to be able to host Friday Night Lights and evening games. EVERY TOWN has I live across the street on butler ave and I am very supportive with some stipulations, I would like the town to address rules on use so it's not on all the time. also reposition the speakers so they are optimized for field and not We vote for lights- for safety and usefulness

As a resident of Lewis Ave who will be directly impacted by this, we are not in favor for having lights on until 10 o'clock every evening and would like to suggest a compromise for an earlier time or the field to be only lit on

As the population in Summit has increased and youth sports has expanded beyond anyone's expectations, I feel we need creative, long term solutions. Going with the solution of turfing and lighting current fields will produce a substantial negative impact on the surrounding neighborhoods. To get the most benefit from the lights and create more playing time those lights will need to be lit longer and more days than is currently proposed. Can we look at As a former Summit athlete across the youth and high school varsity level, and as a parent of Summit youth athletes, the need for quality field access is paramount. Substandard lighting was a frequent inhibitor to varsity practices during my career, and our inability to host Friday night football games was an embarrassment for the team and community.

I understand the local concerns but I believe lighting the field is important for the success of our young athletes. I am in favor of the lights at Tatlock. Populations at our schools are only increasing; therefore, more athletic teams may be necessary to accommodate. In the end, more games may be needed to be scheduled. The lights additionally can provide more times so that the girls teams can have games as well in big stadium setting. I grew We enthusiastically support the Tatlock Lighting Field Project. We have children in Brayton and LCJSMS who play multiple sports as well as enjoy using our Summit fields for games, practice and play with friends. This fall our youngest had his soccer practice at memorial field, but had to switch to Glenside as it was too dark to continue to play at Memorial Field - a location that is much more central and one they can walk to. Installing lighting at Tatlock I support the lights at tatlock and believe it will be great for the children in Summit

I am in full support of the lights at Tatlock. The lights will be a huge benefit for all current and future Summit kids I support the lighting project

This project is long overdue. Other towns are far and ahead of Summit and it's the kids who miss out. I live near We need this desperately in our town. We miss Friday night lights and our kids need more sports fields when it

This should 100% happen.

Yes, in favor of

Installing the lights will unite our community, honor and celebrate our young athletes, and create unforgettable I vote "Yes" to put in lights.

I am concerned about the need for lights vs. the impact on the neighborhood. We have a new turf field at the high school, and from personal experience with my children in rec and club soccer for years, and seeing how many excellent athletes we have on signing days, I don't think lack of field space is enough of an issue to warrant such a huge expense. Our children are thriving sports wise! And while a lit track and other areas may be nice for the community, these will mostly benefit a small percentage of the community that is involved in lacrosse and football. I don't think this unites the community. It is reminding me of the BSW project feeling of divide. And while we can Very supportive!! Wonderful addition to Summit,

I wholeheartedly agree that Tatlock needs lights. Night lighting can add to community attendance and school spirit. Sports in Summit are a significant part of the student's lives, and having modern amenities is important. Regarding negative feedback, my thoughts are this: the lights won't be on all night, they won't be glaring in people's homes,

My husband and I support the lights 1000 percent, especially as I drop my son and his teammates for outdoor practice at the high school at 8pm for a weeknight practice that runs till 9:30pm. They're practicing at this time on a school night since it's the only available field in town with lighting.

I am in favor of lighting upper and lower Tatlock in order to expand the available field space throughout our The Tatlock field lighting project we feel is extremely important to bring progress and opportunities to the town of Summit. Our children and teens deserve the chance to participate in the evenings in healthy activities and a place to develop their passions in sports. As we understand it this project is being thoughtfully considered and Lights should have been added years ago. I Love and support the idea. I love to walk. by the time one gets home from work in the winter with the sun setting by 4:30-5. this will be the safest place to walk since a lot of the I am for the lights on Tatlock

My daughter played flag football and we had to play on fields in NP since we do not have lights. I cannot be at the meeting but want to share that I support lights at tatlock. Other towns have figured out how to make this work and I Lights at Tatlock field will help our community to stay healthy by providing access to the Tatlock field during late PM / evening hours when the field is not usable without lights. For our kids, their time is better spent on the field We are in favor of the much needed lighting of Tatlock field.

I am totally in favor of this project. I think it will be a strong tool to bring the community together in support of

I support the lights

I support the lights

I fully support the installation of lights at Tatlock Field. I think it's important for our Summit youth to have more access to lighted fields...current options are very limited and not adequate for the number of sports

I graduated Summit High School in 2022 and am current a college junior. Throughout my four years being a Hilltopper, Friday Night Lights was always the event of the fall. I remember the buzz around buying a \$20 shirt, coordinating with friends on where they were sitting in the stands, cheering on my friends, and getting magic fountain after. Not only in high school, but ever since I remember I've been attending FNL. You can see the evolution of ages that attend the games. Elementary school kids with their parents pressed up against the fence, middle schoolers running around, high schoolers showing school spirit, and alumni coming back to see certain traditions never end. Well at least they used to not. When I heard that my brother who is on the Summit Varsity Football team would not be able to play under the lights, it sparked a fire inside of me. A sacred and loved tradition had been terminated. I'm in an understanding that there were health issues with the mobile lights that were set up on the field for this yearly game. However, I see a clear benefit by installing lights at Tatlock. Lighting the field would mean more magical games for all sports. If not for the athletes, the school, or the tradition, what about the community? Summit, our beloved town deeply rooted in a culture of strong athletics, a nationally ranked place to live, a sense of belonging it brings to new families. Something that sounds so silly as lights on a field brings a sense of culture and community in our town. Why some people want to rip that piece of what Summit is, speaks on

I support the lights for the following reasons:

- \* Increased Accessibility: Lighting allows the field to be used during evenings, accommodating people who work or attend school during the day.
- \* Maximizes Investment: Athletic fields are costly to construct and maintain; lights increase their utilization, making them a better return on investment.

## 2. Community Benefits

- \* Youth Development: Extended playtime offers more opportunities for youth programs, fostering physical fitness, teamwork, and discipline.
- \* Family-Friendly Scheduling: Evening games and practices can fit more easily into families' schedules, encouraging participation.
- \* Community Engagement: Night games and events can foster community spirit and serve as gathering points for residents.

## 3. Enhanced Safety

\* Improved Visibility: Proper lighting reduces the risk of injuries by making the field safer for players and spectators. I am in favor of lights. It can be done respectfully with strict cut off times and maybe no lights from Dec-end of Feb. We need the field space and town events. As an executive member of the Summit Boosters, Friday Night Lights has been a huge loss. If this passes, the vendor who did the Jefferson lights cannot be used. They did a horrific job and zero follow up. Also, my husband Patrick McGovern is in this industry and has done some significant research and there are ways to bring back lights now on a temporary basis with battery powered/solar powered I think the lights would be a great idea for Friday night lights and for youth teams as well as young kids to play at Expanding access to field space is vital for the children and adults of summit. This includes adding lighting to the tatlock field complex. Sports and outside physical activity are an important part of children's education and there is currently not enough field space available overall and especially after sundown. This project will expand the LIGHT THE FIELD!!!! The kids deserve it. We live in such a great town and a lit football field is something I found our town is sorely missing. Growing up, every home football game was Friday nights under the lights. It was a

A few years ago, I had the honor of being a football coach for a season. Though I am not a football aficionado to the same degree that other parents are, I was able to help corral the young athletes and help the coaches in supporting the kids to learn and do their best. Some of those kids are well on their way to becoming high school stars in sports, on stage or academically, or otherwise.

As always, there are a few talented standouts, and this group was no exception. I remember two boys that were new to football and appeared to be great athletes. They showed great improvement and became reliable pillars on the team. As the season moved into fall, it became more and more difficult to find field time within daylight hours, and we soon found ourselves standing around in the dark and talking about football, but it was actually too dark to play meaningfully, and it became more and more difficult to hold the young teens interest.

Fast forward a few years later, I found out that one of those early highschoolers, in particular went into rehab for drug use.

Now, to me the important responsibility we have as a community is to serve, guide and help our kids grow up in a healthy and supportive environment, where all can flourish. Sports as one avenue, helps these kids make better choices, and on so many levels work towards being better citizens.

When kids decide choose drugs over other healthier alternatives, it means on some level we as a community failed to support them, be it on the field or otherwise. I can't say I blame them. Standing around in the dark talking about football instead of playing is pretty boring.

To me giving kids the opportunity to play sports is one of many necessary tools we have to help them make good choices, boost mental, boost physical health, boost community engagement, reduce drug use and crime associated with it.

The benefits are nearly countless.

The cost of only ONE child losing their way, even temporarily, in dollars to treat, reduced earnings later in life, reduced engagement in the community is easily makes up the cost of these lights! ONE CHILD SAVED easily pays for these lights. That's one child, in one sport, on one team. Across all the summit sports and teams we are talking about a lot of missed opportunities when we let these kids down.

So instead of letting our kids interests go dark, I say: LET THERE BE LIGHT!

Additionally, I find it difficult to argue that lights with today's low spreading technology are a serious reduction in QOL. At least compared to our kids mental health.

As for safety around events, that can be managed, we live in a city, a community and should have opportunities where we gather and celebrate.

In Favor

I support the lighting project. Summit isn't building any new fields. There's no space. So this is a good way to Lights at Tatlock will benefit so many Summit residents. Neighboring homes derive so many benefits from being near a park; this can't be such a hardship as to deprive the larger community of this enhancement.

It is not surprising that the traffic study indicates that the lights can make an already bad intersection at Butler and River even worse. I was hoping to see the environmental impact study look at the sound pollution impacts from the It will be very beneficial to all of our young people, in my opinion. We are merely providing appropriate and secure I am 100% in favor of lights. Field shortage is a long time issue for sports in Summit. Not having lights only adds Feasibility studies by interested parties are clearly biased. I suggest the DCP run a review with the residents of the Lighting the field should be a priority. Fall practices that start after 6 are practically held in the dark during the second hour creating an unsafe environment for our youth players. It's a complete and unquestionable need.

Lights please!

I fully supported some measured approach to providing lighting to Tatlock field. This will ensure access to field time for more students and in an environment where kids are isolated and stuck behind their phones, there is more of a need than ever for increasing sports and physical engagement. The Tatlock lighting project will provide more bonding time, safety to students and residents alike for activities as simple as walking on the track in the morning. I think lights at Tatlock would be great for all our student athletes. I don't think kids would be drinking or doing drugs or whatever the Tatlock neighbors are saying. I think Summit athletics could use the extra time at night. So many young athletes would benefit also. The lights would only need to be turned on until 8 or so during the week. Those couple hours past sunset can make a huge difference to games and practices. On the probably 2 occasions where there would be a Friday night football game, start the game by 6:30 and it will be over by 9:30....lights out by In favor of lights for the field. We need field space for all the kids to enjoy the sport of their choice.

Very supportive of the lights. We have the field, but if it's dark at 5pm half the year, they're being wasted. Summit

I am in favor of lighting Tatlock field - benefits are very important to our youth sports programs. I was unable to attend today's meeting to express my strong objection to the lighting of Tatlock field. Our neighborhood has had to deal with additional traffic, illegal parking, garbage, and noise since the turfing of Tatlock, which our family fought hard against from the beginning. Lighting Tatlock will further burden the Tatlock neighbors with all of these problems into the night as well as creating new light pollution. When do the needs of the Tatlock I am out of town and was not able to attend the meeting this evening, so I am writing to express that I am against this proposal. I am against it now, just as I was against the proposal to turf Tatlock back in 2006.

The compromise reached at that time was to install turf, but not light the field. Apparently, though, the City feels that this compromise does not have to be honored, and is going to, once again, create an atmosphere where those in favor are encouraged to express their support for all of the positive things that lights will bring ("community, celebration, and creating moments that last a lifetime"), while, ostensibly, weighing the "concerns of the neighbors."

I can't tell you how ridiculous this all is. Why? Because there is—and always will be—a small, but very vocal group of people who just love sports—football in particular—and think that it was just be great if "we" had lights on the field. And, not surprisingly, there are homeowners—taxpayers, Summit residents just like everyone else—who understand the negative impact having lights will have on them—on their enjoyment of their homes; on their property values; and on the sense of community in their neighborhoods.

Apparently, DCP whole-heartedly agrees with the pro-lighting fanatics, stating in their recent email: "Friday night lights aren't just for football—they're about community, celebration, and creating moments that last a lifetime. With lights on the field it strengthens community connections, and gives our athletes the spotlight they deserve." To characterize this email as a dereliction of duty on the part of the DCP is an understatement. In the end, I believe I have serious concerns about the proposal to install lights on the field, a decision that will have significant and lasting impacts on our neighborhood.

First, I want to acknowledge that my own children play sports in this town. I deeply value the role athletics play in fostering the health and well-being of our community's children. However, as much as I support the town's commitment to sports, I'm equally concerned about the health and well-being of the residents who would be exposed to the detrimental effects of outdoor artificial lighting at night. Research has shown that excessive nighttime light can disrupt sleep, increase stress, and have other negative health effects. Diabetes, obesity, depression, heart disease, cancer are just a few of the diseases linked to increased exposure to artificial light at night in recent studies. So many communities are doing all they can to reduce nighttime artificial light in the wake of these findings, while we are doing the total opposite with this project.

Even with advanced technology like DarkSky-certified lights, artificial lighting will still have negative effects. The environmental impact study may claim "zero-footcandles of light spillage," but this only measures horizontal light. It doesn't account for the ambient brightness that will undoubtedly affect nearby homes. Shielding and aiming can only do so much; the perception of light and its impact on daily life cannot be fully captured in technical measurements. It should also be mentioned that 70-80 feet light poles are much taller than any nearby structure, and we will have to live with that unsightliness forever. The tallest nearby trees are 30 feet. 70-80 foot structures have no place in a residential neighborhood like ours.

Moreover, without clear evidence that this is the only viable solution to limited field space, it's hard to accept that such a significant change is necessary. Are there alternative locations that can be turfed, or other approaches that could meet the town's needs without disrupting our neighborhood? These questions remain unanswered.

Additionally, the lights would bring extended hours of activity. Evening games and practices will increase noise, traffic, and congestion during times when our neighborhood is currently quiet. For families like mine, this means I am in support of the tatlock light project. After attending the presentations last night at the Middle School I came away with the opinion the pros far out way the cons. Field space is at a crisis level and for SHS to maintain the upper echelon HS sports program s lights are critical to long term success. Kids need outlets away from screens I think the lights will be a great addition to the field and will allow the town to use it for more activities.

I am happy the town is considering this lighting project at Tatlock field. As a nearby resident, I am not against it per se. However, I urge the Council to consider the parking situation for this project, which is something that is seems has been largely overlooked. There is an issue with parking on Sheridan Rd. and Lewis Ave. during games and graduation for example when cars are parked on both sides of the Sheridan Rd street. The streets become effectively one way streets. Sheridan rd does not have sidewalks and it becomes dangerous for pedestrians to After attending the recent community meetings, I must express my strong opposition to the proposed stadium lighting project.

The substantial costs associated with this project do not appear justified, and the benefits presented were unconvincing. The lighting is likely to disrupt residents' quality of life and could negatively impact local wildlife (primarily bats). Additionally, I find the jokes made on social media regarding this issue to be in poor taste and unprofessional.

I am for the lights as sports and other events bring the community together. It's significantly better for kids to be active at night vs watching screens. I think the Tatlock lights could be a strong positive for the town as long as the proper safeguards are in place. I live on Sheridan Rd. and during large scale events at Tatlock people park on both sides of the street. This effectively makes Sheridan a one-way road with cars having difficulty passing thru Can DCP please share an updated cost estimate? The \$1.6m being mentioned is likely obsolete. Thanks

A few questions for the lighting professionals: 1) If stadium lights are not approved, or in the interim, do they provide non-diesel temporary lighting that could be used for Friday night lights? 2) From experience with similar projects, how often are repairs/maintenance required after lights are installed & for what time period are repairs/maintenance covered for free of charge? If a charge, what costs could be expected to incur for that?

Questions for DCP - 1) Will the same lighting company be handling the required new lighting on pathways & the I do not live in the Tatlock neighborhood and will not be directly impacted by the proposed stadium lights, but I am a Summit resident who is concerned about the use of tax dollars, the well-being of all Summit residents, and the environment. I strongly oppose the proposed stadium lights.

I am dismayed that the environmental impact statement did not even mention the impact of stadium lights on insects, probably because if it was addressed the authors would have had to acknowledge the devastating impact not just to insects and pollinators, but to all beings down the food chain. I couldn't help thinking after reading the environmental and traffic reports that the City succeeded in paying "experts" to say exactly what the City wanted said. The reports are clearly one-sided and biased and were written to support a predetermined conclusion. I am upset that my tax dollars were used to support this farce.

Below is an excerpt from a report from the Center for Biological Diversity in a report prepared to assess the impact of stadium lights along Arizona's souther border:

"Artificial lighting at night threatens insect biodiversity. Lighting can change nocturnal insect behaviors such as feeding, migration and dispersal, predator avoidance, and reproduction. Studies show a high likelihood that the effects of night lighting on insects can cause cascading effects on the larger food chain and ecosystem function. Artificial lighting may even diminish pollination success by disrupting predator-prey relationships and natural rhythms."

No amount of shielding or other technology will mitigate the harmful impact of stadium lighting on insects. The I would like to understand more about what policies are planned to mitigate the issues people are concerned about; and to what extent the council can guarantee these policies will not only be put into place (and not reversed), but also enforced: (e.g. parking enforcement, noise ordinances, shut-off times, shut-off when not-in use

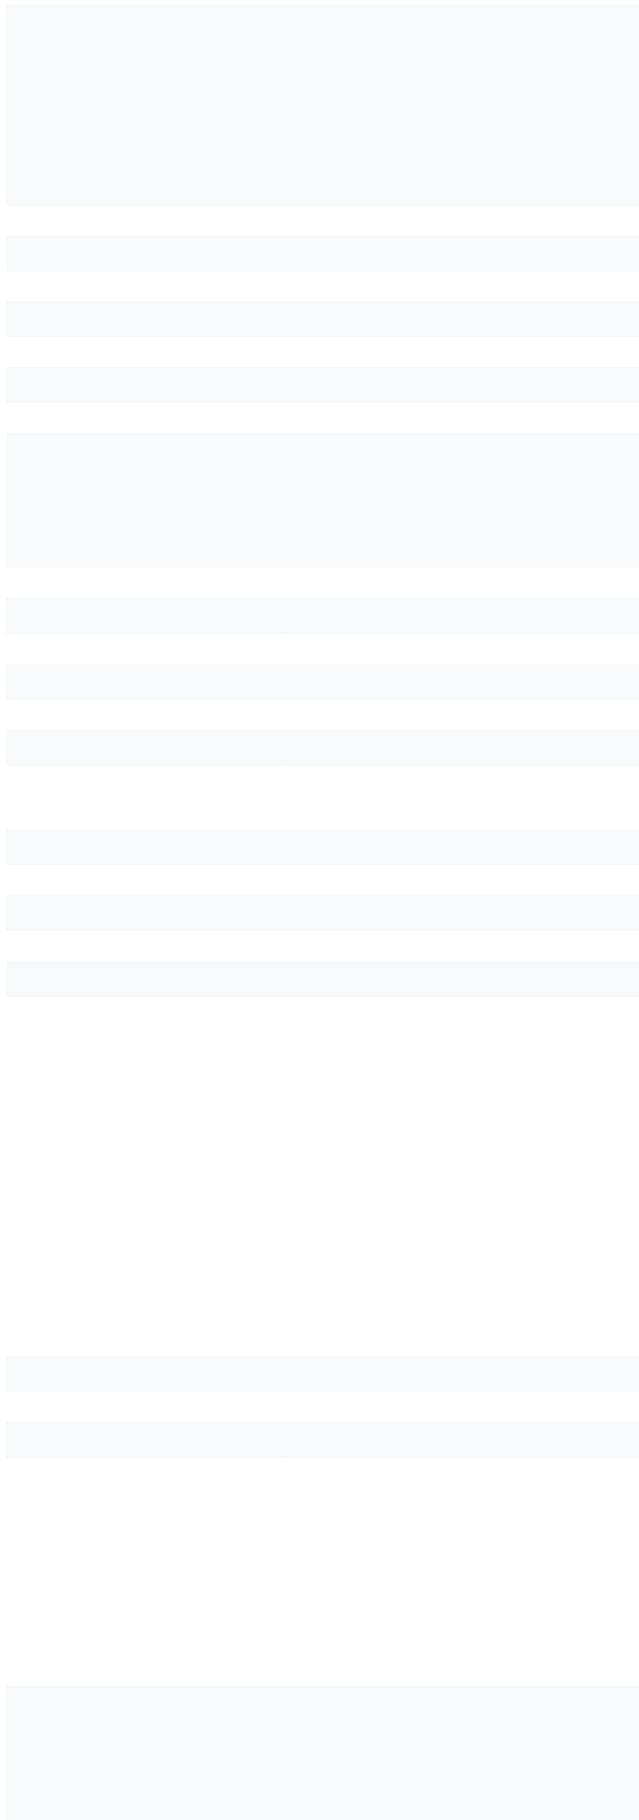

I write in strong support of the proposal to install lights at Tatlock Field. This improvement will bring significant benefits to Summit's residents, including enhanced recreational opportunities for students, families, and community members. By extending the field's usable hours, we can better accommodate various sports teams and youth programs—providing them with safe, well-lit spaces to practice and play, while easing scheduling

---

## Response

-----  
procedures to govern and limit the use of the lights. We are not at the point to revise any ordinances because the project has not been approved. Should it be approved, we will address. Similarly, with traffic professionals for addressing.
